

ABSTRACT OF THE DISCLOSURE

A bag-making and packaging machine equipped with a stocker apparatus which receives bags that are successively fed out from a bag-making apparatus, stacks a predetermined number of bags, and supplies the stacked groups of bags to a packaging apparatus. The stocker apparatus has stocking sections that are capable of stocking bags in groups, and such stocking sections as a whole can be raised and lowered simultaneously. When the operation of the packaging apparatus is temporarily stopped, groups of bags are successively stocked in the stocking sections of the stocker apparatus; as a result, the operation of the bag-making apparatus can be continued.
